SUMMARY

Full Stack Engineer with expertise in Java (Spring Boot) and Angular frameworks. Engineered microservices architectures that contributed to a 40% increase in user engagement. Integrates TensorFlow and scikit-learn machine learning models into production applications while ensuring Responsive Design for seamless user experiences. Developed scalable and maintainable software solutions following Test-Driven Development (TDD) and best coding practices.

TECHNICAL SKILLS

Languages: Java, Python

Databases: SQL, MongoDB, PostgreSQL

Frontend: AngularJS, ReactJS, Tailwind

Backend: Spring Boot, FastAPI

Frameworks & Libraries: scikit-learn, TensorFlow, PyTorch

Tools & Platforms: Git, GitHub, Docker, Azure, Microservices, RESTful APIs, CI/CD Pipelines, Agile, Kubernetes

CERTIFICATIONS

Java Full Stack Developer

From Symbiosis University (January 2025)

Deep Learning Fundamentals

From Cognitive Class (January 2026)

MongoDB

From Coursera EDUCBA (November 2024)

Angular Developer

From Coursera EDUCBA (January 2025)

EDUCATION

Bachelor of Computer Application (BCA) 2022-2025

Commerce Management & Computer Science collage, Nashik, Maharashtra

Master of Computer Application (MCA) Pursuing

MET's Institute of Engineering, Nashik, Maharashtra

PROFESSIONAL EXPERIENCE

AI & Machine Learning Virtual Intern | Smart Bridge 21/01/2026 - 03/03/2026

Engineered and deployed RESTful API endpoints using FastAPI to integrate predictive ML models into production web applications. Architected data processing pipelines for datasets of 10,000+ records, using Python, pandas, and NumPy to ensure high performance data transformation for backend services. Improved model accuracy to 85%+ through targeted hyperparameter tuning and feature engineering, boosting classification reliability.

PROJECTS

Smart Lexicon (using LLM Api integration)

Engineered with a full-stack vocabulary platform using Java and Spring Boot, integrating LLM APIs to create a structured spaced-repetition system for improved word retention.

Built a bilingual AngularJS frontend with part-of-speech tagging, driving adoption by 100+ pilot users.

Managed data persistence and semantic relationships using SQL to store usage examples and contextual learning features.

The Urban Biodiversity Oracle (Eco-AI)

Constructed a predictive ML model using TensorFlow and scikit-learn that translates urban soundscapes into ecological data with 85%+ classification accuracy.

Analyzed acoustic patterns across 500+ audio samples to detect endangered pollinators and assess environmental health indicators. Built an interactive decision-making dashboard using FastAPI and ReactJS to provide data-driven planting recommendations for urban planners.
